### **DETAILED ACTION**

1. This Office Action is in response to applicant's amendment filed on February 21, 2006 and further to applicant's supplemental amendment filed on April 13, 2006.

#### ***Allowable Subject Matter***

2. **Claims 3-5,8,9, and 12-32 are allowed.**

#### **Reasons For Allowance**

3. The following is an examiner's statement of reasons for allowance:

Claims 8 and 12 are allowable subject matter over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that an intermediate lever couples the transmission lever with the latch.

Johnstone (US 3,386,761) and Raffelsiefer (US 4,298,223) fail to disclose that an intermediate lever couples the transmission lever with the latch.

Cited prior art, Bernard (US 4,783,102), Amano (US 6,557,910), Spurr (US 6,773,042), and Noel (US 4,203,621) disclose similar devices that the one described by the applicant in claims 1-7,10,11,14-19, and 26-28. However, the references fail also to disclose that an intermediate lever couples the transmission lever with the latch.

Kleefeldt (US 4,518,180) discloses a motor vehicle lock comprising a latch (2), a transmission lever (9) and a blocking element (3). Kleefeldt discloses that an intermediate lever (14 and 15) couples the transmission lever (9) with the latch (when 10 engages 13). However, Kleefeldt fails to disclose that the blocking element will

block the movement of the transmission lever of the ratchet kinematics. Kleefeldt discloses that blocking element (3) will block the movement of the latch (2).

New cited prior art, Raymond (US 6,659,515) discloses a vehicle lock comprising a latch (7), a transmission lever (18), a blocking element (8) and an intermediate lever (13) connecting the latch with the transmission lever. However, Raymond fails to disclose that the blocking element will block the movement of the transmission lever of the ratchet kinematics. Raymond discloses that blocking element (8) will block the movement of the latch (7).

Although Raymond discloses the connection of the latch with the transmission lever by means of a intermediate lever, it would not be obvious to provide this teach into the device described by Raffelsiefer, since the device described by Raffelsiefer uses springs elements so as to eliminate the use of a motor to move the latch.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
